/prime — session-start flow

load rules → compare live state → report readiness · nothing is edited

/prime [focus]

① LIVE STATE · auto-run

injected via !`cmd` before Claude reasons

```
$ git status --short
$ git log --oneline -5 || true
$ ls mermaid excalidraw md prompts
$ ls intents
$ ls .claude/agents commands
$ ls .claude/skills
$ npm run check --silent
$ npm run metrics --silent
```

→ git: branch, untracked, commits
→ entries + intents inventory
→ health: errors / warnings
→ metrics bands: ok / warn / ALERT

why inject? zero tool calls, state is fresh, no stale-memory guessing

② READ ORDER · 5 steps

1 · Rules
CLAUDE.md already in context
so: do NOT re-read it

2 · Handoff
HANDOFF.md vs live state
repo wins on mismatch

HANDOFF ≠ live state?

yes → list every disagreement, trust the repo

3 · Mindset
PLAYBOOK autonomy tiers
REVIEW severity rules

4 · Open work
HANDOFF §4–5 + intents
with status ≠ done

5 · Focus (optional)
only files $ARGUMENTS needs
(skill, scripts, …)

③ REPORT · ≤ 15 lines

```
1 repo in 1 line + health
2 drift vs HANDOFF.md
3 pending / blocked on me
  (+ my recommendation)
4 hazards that apply NOW
5 next step + its tier
6 "Primed. What are we
   doing?"
```

language = the one you used last
no speculation: say “unknown”

Primed.
What are we doing?

READ-ONLY RAIL · allowed-tools: Read · Glob · Grep · git status|log · ls · npm run check|metrics
no edits · no commits · no fixes — fixing is a separate step, after you decide
