AI-native SDLC loop — scaled to INSTANTS

six stages · every stage leaves a FILE behind (green) · the last stage feeds the first

Building is cheap → human attention goes to GATES, on ARTIFACTS, enforced by SYSTEMS

you decide at: intent accepted · ASK gate · metric ALERT Claude does: every pass in between

FEEDBACK EDGE (dashed amber): metric ALERT or a repeated mistake → NEW intent / NEW rule
the rule lands in: CLAUDE.md known failure modes · scripts/check.mjs · scripts/evals.mjs
