NONCONFORMIST — sage solo, release facts and musical identity

Problem

Say in one breath what the track is and which traits must survive when Suno continues it.

Instant solution

Fact	Value
Artist / title	Gabe Sage — sage solo
Platform	Audius (`audius.co/esha_szabo/sage-solo`)
Genre / mood	Techno / Excited
Tags	techno, live
Released	2022-08-02
Length	4:53 (293 s)
Working material	61.02 s live-session snippet (length as reported by the analysis)

Identity in one sentence: a groove-led live-session techno track whose identity comes from the **bass rhythm**, the **percussion interplay** and deliberate **kick-and-bass dropouts**, not from a synth melody.

Traits to preserve in any continuation:

1. Tight, repetitive four-on-the-floor kick.
2. Deep, elastic, syncopated bass figure: the hook.
3. Woody conga/tom strikes, snare rolls, clipped hats.
4. Alternation: full bass-led groove ↔ percussion-only passage.
5. No headline lead melody.
6. Funky, hypnotic, playful, underground mood.

Goal: continue the original recording with Suno **Extend**, not recreate it from a reference (that was hell YEAH, see `nonconformist-suno-audio-reference-workflow`).

Why it works / gotchas

- The release facts come from the Audius API; the style and trait list is an analysis estimate from the snippet, not from the DAW project.
- The snippet is ~21 % of the 4:53 track (61 ÷ 293); the full arrangement is not transcribed.
- Losing trait 4 (the dropouts) is the fastest way to make it sound like generic tech-house.
- Related entries: `nonconformist-sage-solo-sound-dna`, `nonconformist-sage-solo-suno-3a-faithful`, `nonconformist-sage-solo-suno-3b-warehouse`, `nonconformist-sage-solo-suno-extend-workflow`.

Diagram brief

- Type: identity core + facts card.

- Left: release facts card (Gabe Sage · Techno · 2022-08-02 · 4:53 · live).
- Center: IDENTITY core fed by three inputs: Bass rhythm · Percussion interplay · Kick/bass dropouts.
- Right: "no lead melody" crossed-out chip; guardrails strip with the 6 traits.
