NONCONFORMIST — sage solo, technical sound breakdown

Problem

Know the tempo, the sound layers and where the snippet ends before choosing an Extend point.

Instant solution

Parameter	Value
Tempo	**~126 BPM** (estimated, unverified)
Meter	4/4
Core style	minimal / tribal techno, funky tech-house influence
Vocals	none (instrumental)

Sound element	Character to reproduce
Kick	tight, repetitive four-on-the-floor pulse
Bass	deep, elastic, syncopated rhythmic figure
Percussion	wooden conga/tom-like strikes, snare rolls, clipped hats, syncopated accents
Melody	no prominent standalone lead; groove-led identity
Mood	funky, hypnotic, playful, underground, percussive

Snippet map (estimated, unverified; low-end presence, not loudness):

Time	Section	Low end
0–25 s	Bass-led groove: full foundation, rolling low-end hook	●●●
25–40 s	Percussion passage: kick/bass strongly reduced, drums + fills carry it	●○○
40–55 s	Groove returns: original low-end pattern back	●●●
55–61 s	Percussion passage: bass drops away again	●○○

Key decision: the snippet **ends in a percussion passage**. The continuation should keep that rhythm briefly, then bring back the kick + bass groove. A new intro breaks continuity.

Why it works / gotchas

- BPM and section times come from the ChatGPT analysis ("listening + low-frequency energy analysis"); none were checked in a DAW or with a tool. Confirm before you trust them.
- The pattern groove → percussion → groove → percussion is the track's structure, not a mixing accident: keep it.

- Trimming to under 60 s for the Free plan must **keep** the 55–61 s percussion ending (see `nonconformist-sage-solo-suno-extend-workflow`).

Diagram brief

- Type: element table + timeline.
- Header chips: ~126 BPM (est.) · 4/4 · instrumental · "no lead".
- Timeline 0 → 61 s with 4 blocks; a low-end bar per block (high · low · high · low).
- Arrow from the last block: "continue drums → bring back kick + bass" (the Extend point).
