NONCONFORMIST — sage solo, Suno Extend SAGE-3A (faithful)

Problem

Extend the uploaded live-session snippet into a full DJ-mix-length track without losing its identity.
Recommended first generation; target ~6 min if supported.

Instant solution

Styles (957 / 975 characters)

```
Seamless instrumental continuation of the uploaded Gabe Sage live-session excerpt,
around 126 BPM, 4/4, funky underground minimal and tribal techno with restrained tech-
house swing. Preserve the tight repetitive kick, subby syncopated bass pulse, crisp
snare/clap backbeat, dry shuffled hats, woody conga/tom interplay and quick rolling
snare fills. The signature arrangement alternates a full bass-led groove with sparse
percussion-only passages; the excerpt ends in a drum-led passage. Continue those drums
first, then bring back the original kick and bass naturally without restarting.
Develop through small percussion variations, subtle filtering, measured low-end
dropouts and patient returns; avoid new headline synth melodies. Punchy drum
transients, warm saturation, controlled mono sub and restrained ambience. Long
hypnotic groove, one understated break, extended mixable kick-and-percussion outro. No
vocals, EDM drops, big risers or genre jumps.
```

Lyrics (instrumental arrangement instructions)

```
[Instrumental Only]
[Seamless Continuation]
[Continue the existing percussion-only passage]
[Preserve the original conga rhythms, hats and snare rolls]
[Groove Return]
[Gradually reintroduce the original kick and syncopated bass]
[Hypnotic Main Groove]
[Maintain the recognizable bass rhythm]
[Introduce subtle percussion variations and ghost notes]
[Percussion Development]
[Add interlocking tom and conga patterns]
[Short rolling snare fills]
[Minimal Breakdown]
[Remove kick and bass]
[Leave the original percussion rhythm intact]
[Groove Re-Entry]
[Bring back the familiar kick and bass together]
[Extended Main Groove]
[Patient, funky, hypnotic percussion-driven techno]
[DJ Outro]
[Gradually strip away supporting elements]
[Retain the kick, hats and minimal percussion]
[Instrumental End]
```

Pro	Contra
Maximum stylistic fidelity; minimal risk of losing the original identity	Less dramatic evolution, few new melodic elements

Why it works / gotchas

- The bracket Lyrics are **guidance, not timeline control**: Suno may reorder or skip sections.
- "Seamless Continuation" only works if the Extend point is inside the percussion ending; see `nonconformist-sage-solo-suno-extend-workflow`.
- The ~126 BPM in Styles is an estimate; fix it here if a DAW gives another value.
- Blank lines between sections were removed for compactness.

Diagram brief

- Type: horizontal arrangement timeline with a low-end lane.
- 8 blocks: Seamless Continuation → Groove Return → Hypnotic Main Groove → Percussion Development → Minimal Breakdown → Groove Re-Entry → Extended Main Groove → DJ Outro.
- Low-end lane: off · rising · on · on · **off** · on · on · thinning.
- Percussion lane runs unbroken under every block (the constant).
