
git init
git config user.email set?
no
yes
git config user.name / user.email (repo-local)
.gitignore: deps, build output, .env*, *.log, local settings
Run checks / CI locally
Secret scan on files to be tracked
hit
clean
Remove secret, revoke + reissue the key
Commits by topic: scaffold, tooling, workflow, content
git status clean, git log looks right
Remote requested?
no
yes
Stop: no push
git remote add + push (CI activates)
