# AI TOOLS — github-steward · project management

primary job: turn the plan into a navigable, truthful issue tree — and keep it truthful as work lands

## HIERARCHY — one type: label per issue

- **Milestone** — time box = plan milestone
  - **Umbrella** `type:umbrella` — one per deliverable outcome (e.g. "v0.1.0 definition of done")
    - **Epic** `type:epic` — one per delivery surface carries a milestone
      - **Sub-issue** `type:sub-issue` — one branch + one PR carries the same milestone

### NATIVE SUB-ISSUE LINK — the API takes the child's id, not its number

```
CHILD_ID=$(gh api repos/w7-mgfcode/SlideRAG-mini/issues/<child_no> --jq .id)
gh api -X POST \
  repos/w7-mgfcode/SlideRAG-mini/issues/<parent_no>/sub_issues \
  -F sub_issue_id="$CHILD_ID"
```

## MILESTONES — 480 min budget from M1

| M0 | M1 | M2 | M3 | M4 | buffer |
|---|---|---|---|---|---|
| Readiness outside the 8 h clock | Skeleton 60 min | PPTX Ingestion 120 min | Grounded RAG 120 min | Deploy & Polish 120 / 85 min | v0.1.0 Release Gate |

Σ Estimate (min) per milestone vs. budget → overrun goes into umbrella Risks; never trim scope yourself — the owner decides (OQ-25 / A-5)

## EVERY NEW ISSUE

idea → vision gate → body template cite file:line → Estimate (min) labels + milestone

vision gate: product-vision.md litmus test

LATER / EXCLUDED → umbrella "Out of scope" not an issue

fields
Type · Area · Priority
Gate · Estimate (min)
Score

Projects v2 · SlideRAG Mini Delivery

| Backlog | Ready | In Progress | In Review | Blocked | Done |
|---|---|---|---|---|---|
| | | | | | |

## LABELS AS TAXONOMY

```
type:      umbrella · epic · sub-issue          exactly one
area:      api ingest rag config ui demo tests
           docs deploy ci repo release          one or two
gate:      qg-01 … qg-09
priority:  p0 · p1 · p2      tier:  must-have · later
status:blocked               name the dependency in the body
```

`gh label create <name> --color <hex> --description <d> --force`

## CLOSE DISCIPLINE — bottom-up, only with proof

Sub-issue → Epic → Umbrella (reopen: Epic ← Umbrella)

| Sub-issue | Epic | Umbrella |
|---|---|---|
| PR merges (Closes #n) | all children closed + own criteria ticked | closes last |

*(proof: PR #n / commit abc1234 / command → output)* ← required to tick a box

↺ closed parent with open children → reopen it, comment why

✗ never close an issue just because work "looks done"
