NONCONFORMIST — Techtoon ep.01/24, technical sound breakdown

Problem

Know the tempo, the sound layers and which 59 s to upload before prompting.

Instant solution

Parameter	Value
Tempo	**~123 BPM** (estimated, unverified)
Meter	4/4
Snippet	81.4 s (1:21.4)

Sound element	Character to reproduce	Preserve
Bassline	rounded, bouncing, repeating low-end motif	essential
Kick	firm, steady techno foundation	essential
Percussion	rapid tom/conga-like fills, syncopated strikes	essential
Tonal motif	restrained, repeating pitched electronic figure	essential
Hats / claps	tight, ticking high-frequency rhythm	high
Texture	swirling, rattling, processed percussion	high
Transitions	dense drum development → simpler groove	essential

Snippet map (estimated, unverified):

Time	Section	Low end
0:00–0:11	Established bass groove: full foundation, tonal motif	●●●
0:11–0:49	Percussive escalation: low end reduced, fills speed up	●○○
0:49–1:05	Rhythmic contrast: brief low-end returns between percussion passages	●●○
1:05–1:21	Main groove returns: stronger bass + kick	●●●

Key moment: the snippet **ends on the established groove**. Upload **0:22 → 1:21** (59 s, est.): it keeps the rolling fills and ends in the main groove, so Extend picks up from a solid bass + kick.

Why it works / gotchas

- BPM and section times come from the analysis (listening + low-frequency energy), not from the DAW project.
- Align both cut points to bars; at ~123 BPM (est.) one 4/4 bar is ~1.95 s.

- Alternative cut 0:00 → 0:59 shows the bass motif at once, but ends inside the percussion passages; my reading: a weaker Extend point.
- ●●○ is my reading of "brief low-end returns interspersed"; the analysis gives no level for it.

Diagram brief

- Type: element table + timeline.
- Header chips: ~123 BPM (est.) · 4/4 · 81.4 s.
- Timeline 0 → 81.4 s: 4 sections with a low-end lane; the 0:22 → 1:21 (est.) upload window as a bracket; Extend point at its end, in the groove.
