NONCONFORMIST — Techtoon ep.01/24, Suno Extend 5A (Techno)

Problem

Make the existing groove more powerful and club-ready without losing its rhythmic personality. The reliable club continuation and the reference for source fidelity; the analysis ranks it second, after 5B.

Instant solution

Styles (948 / 975 characters)

```
Seamless instrumental continuation of the uploaded Gabe Sage Techtoon live-session snippet, approximately 123 BPM, straight 4/4 underground hypnotic techno. Keep the original rounded pulsing bass figure, steady deep kick, crisp ticking hats, clipped claps, syncopated woody tom/conga hits and restless rapid-fire percussion rolls. Preserve the small repeating tonal motif and the call-and-response between solid low-end groove and busy, swirling drum fills. Resume from the groove at the upload boundary, no fresh intro. Evolve with subtle resonant filter sweeps, tightly timed delays, controlled rhythmic dropouts and a patient rising drum arrangement. Let the original bass pulse return after percussion-led passages; develop into a focused driving peak, then finish with a long stripped DJ-mixable outro. Punchy transients, warm analog body, firm mono sub, clear spatial detail. No vocals, new dominant lead, trance breakdowns or festival drops.
```

Lyrics (instrumental arrangement instructions)

```
[Instrumental Only]
[Seamless Original Groove Continuation]
[Preserve the repeating bass motif and kick]
[Continue the existing hi-hat and percussion rhythm]
[Rhythmic Development]
[Increase the density of syncopated tom and conga fills]
[Short resonant filter movements]
[Driving Techno Groove]
[Full kick and rolling bass]
[Tight claps and precise shuffled hats]
[Controlled rising percussive energy]
[Percussion Tension]
[Short low-end dropouts]
[Fast rolling drum fills]
[Maintain the original rhythmic identity]
[Minimal Breakdown]
[Reduce kick and bass]
[Percussion and short echoes remain]
[Powerful Groove Return]
[Original bassline returns]
[Full hypnotic techno foundation]
[Extended Main Groove]
[Deep driving pulse and progressive drum variations]
```

```
[DJ-Friendly Outro]
[Remove additional textures progressively]
[Keep kick, bass and essential hats]
[Instrumental End]
```

Pro	Contra
Very high groove fidelity, low risk of losing the identity	Moderate sonic change only

Why it works / gotchas

- The bracket Lyrics are an **arrangement plan, not guaranteed generation commands** (the analysis's wording).
- ~123 BPM in Styles is an estimate; fix it here if a DAW gives another value.
- Blank lines between Lyrics sections were removed for compactness.
- Judge it on the bass-vs-fills call-and-response, not on loudness: the analysis says louder, darker or more polished is not the goal.

Diagram brief

- Type: horizontal arrangement timeline with a low-end lane.
- 8 blocks: Seamless Original Groove Continuation → Rhythmic Development → Driving Techno Groove → Percussion Tension → Minimal Breakdown → Powerful Groove Return → Extended Main Groove → DJ-Friendly Outro.
- Low-end lane: on · on · full · short dropouts · reduced · full · on · on (outro keeps kick + bass). Percussion lane constant, density rising in blocks 2–4.
