NONCONFORMIST — Techtoon ep.01/24, continue with Suno Extend (3 directions)

Problem

Turn the snippet into full tracks by continuing the real audio in three directions from one upload, and compare takes instead of guessing.

Instant solution

Loop (continue with Extend):

1. Trim to 59 s, **0:22** → **1:21** (est.), so the upload ends on the main groove: `ffmpeg -ss 22 -to 81 -i snippet.wav -c copy snippet-59s.wav`; nudge both points to bar lines.
2. Upload → Extend from the **end** of the upload (the groove). Instrumental on.
3. One direction per run, same upload: **5B** (`nonconformist-techtoon-ep01-suno-b`) → **5A** (`…-suno-a`) → **5C** (`…-suno-c`); the analysis ranks them in that order, running them in that order is my choice. Lyrics if the UI takes them; otherwise use the blocks as your plan.
4. Validate the source motif and the transition first → quality passes? → no: refine ONE creative variable → back to 2 (the analysis's flowchart).
5. Yes → **Get Whole Song**, then review the full arrangement and outro.

Which direction for what (analysis's comparison)

	5A Techno	5B Minimal	5C Dark Industrial
Bass	driving	elastic, sparse	heavier, gritty
Percussion	energetic	intricate, reduced	metallic, aggressive
Sonic change	moderate	low–moderate	high
Identity risk	low	low	higher
Best use	extended club mix	afterhours minimal mix	experimental warehouse version

QA rubric (criteria + weights from the analysis; the 1–5 scale, the formula Σ score × weight × 20 and the log below are the house method from `nonconformist-sage-solo-suno-extend-workflow`)

Criterion	Weight
Source fidelity	30 %
Continuation	25 %
Arrangement	20 %
Production quality	15 %
DJ usability	10 %

Generation log (one row per take)

```
| # | date | dir | changed | fidelity | contin. | arrang. | prod. | DJ | /100 | keep?
| notes |
|---|------|-----|---------|----------|---------|---------|-------|----|------|-------
|-------|
| 1 |      | 5B  | –       |          |         |         |       |    |      |
|       |
```

Suno limits (help.suno.com, checked 2026-10-20; article last edited in brackets)

- Free plan: upload up to 60 s, then Extend / Cover; Pro/Premier up to 8 min (6141569, 2025-05-30).
- Extend: drag the white arrow to choose how much of the original to keep; Get Whole Song stitches the extension to the original (2409601, 2025-12-19).
- Whether Instrumental mode hides the Lyrics field: unconfirmed, verify in the UI.

Why it works / gotchas

- The test question: does Suno keep the bass-and-percussion interaction while going in three genuinely different directions? Louder, darker or more polished is not the goal.
- One change per take keeps the log comparable; never score a take you have not heard.
- **Licensing checkpoint:** Free-plan songs are personal, non-commercial and cannot be monetized (9601601, 2025-12-17); subscribing later does not grant commercial rights to them by default, exceptions are not guaranteed (2425729, 2025-12-17); on Basic, Suno owns what it generates, and for an extension started on Basic it advises against assuming ownership (2871105, 2026-01-07). Decide before generating a release take under Gabe Sage.

Diagram brief

- Type: flowchart with a retry loop and a 3-way fork.
- 81.4 s snippet → trim 0:22–1:21 → upload → Extend + Instrumental → fork 5B / 5A / 5C → generate → validate motif + transition → score ≥ target? → no: change ONE variable → back; yes: Get Whole Song → review.
- Side card: rubric weights; licensing as a gate before "release".
