Add an instant → export it

A: seven steps from “save this” to a verified entry · B: how a source file becomes PNG / PDF in out/

A · ADD an instant (skill: add-instant)

1 · Classify

diagram → mermaid/
sketch → excalidraw/
note → md/

2 · Name

kebab-case, topic first
name exists? STOP
and ask, never overwrite

3 · Write

from _templates/
title · tags (3–5)
source (project/link)

4 · Index

npm run index
README index is
generated, never by hand

5 · Verify

npm run check
:full if a .mmd changed
fix every ERROR

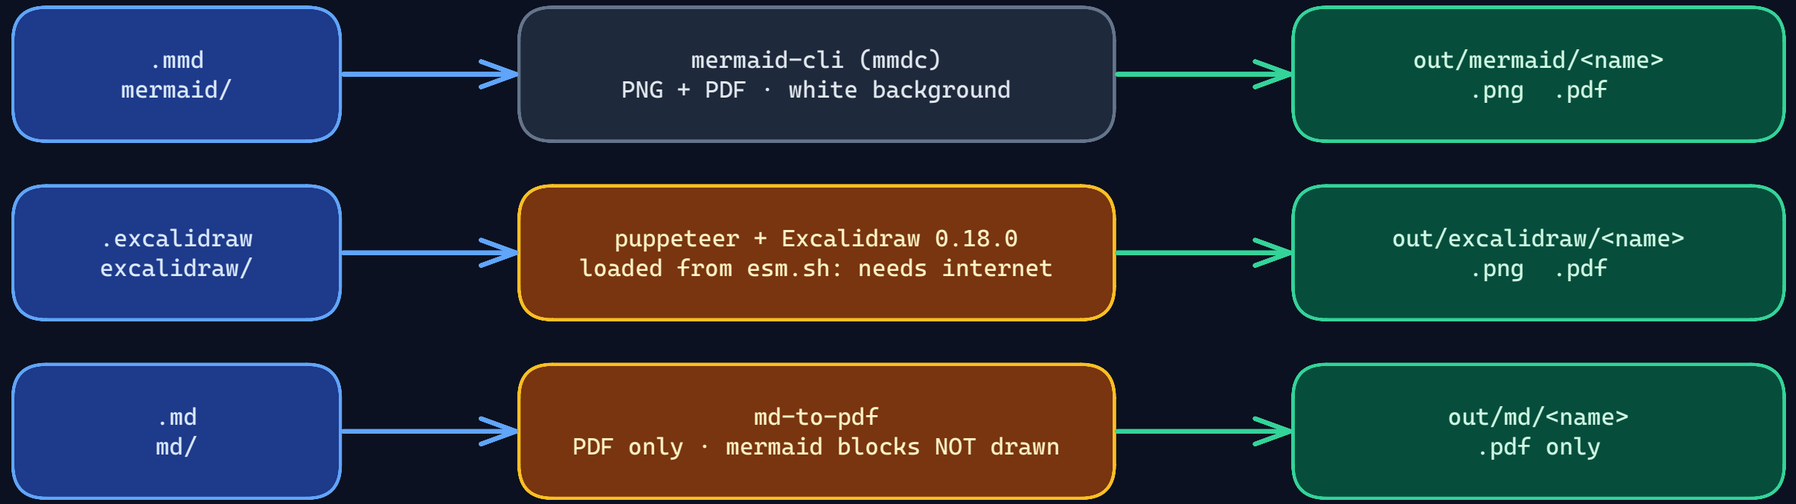
6 · Export

only if asked (see B)
npm run export -- file
then OPEN the output

7 · Report

path · tags · check
result in one short
message

B · EXPORT pipeline (npm run export -- <file> | export:all skips files whose out/ copy is newer)



KNOWN FAILURES (from CLAUDE.md)

- md → PDF skips ```mermaid blocks
  fix: export the .mmd, embed the PNG
- Excalidraw export needs internet
  (the lib comes from esm.sh)
- snap Chromium is unreliable headless
  use puppeteer chrome-headless-shell
  with --no-sandbox
- gate asks before rm / overwrite

“works” = you OPENED the produced file
out/ is generated · git-ignored · never hand-edit
