NONCONFORMIST — hell YEAH, Suno v6 Version B (modern club)

Problem

Keep the percussive identity but push the track towards contemporary, DJ-friendly club production.

Instant solution

Styles

```
Modern underground hypnotic techno, 126 BPM, 4/4, minimal tribal groove, sophisticated organic-electronic percussion, deep punchy analog kick, warm rolling sub-bass, syncopated rubbery synthesizer arpeggios, resonant filtered plucks, intricate conga-inspired electronic toms, precise metallic clicks, shuffled micro-percussion, complex interlocking rhythmic loops, occasional rapid drum fills. Minimal melodic development, evolving polyrhythmic tension, subtle analog modulation, tactile drum transients, carefully controlled bass frequencies, dry upfront percussion contrasted with delicate spatial effects. Dark futuristic warehouse atmosphere with playful rhythmic energy. Long-form DJ-friendly progression, steady groove, subtle tension and release, no commercial EDM drops, fully instrumental.
```

Lyrics

```
[Instrumental]
[DJ-Friendly Intro]
[Filtered percussive pulses, syncopated hollow synth plucks, sparse rhythmic clicks]
[Groove Introduction]
[Minimal kick, muted rolling bass and shuffled percussion establish the pulse]
[Tribal Rhythm Development]
[Layered toms, wooden clicks and syncopated metallic accents]
[Rapid percussion fills evolve above the repeating synth sequence]
[Main Groove]
[Full punchy kick, elastic bassline and intricate rolling percussion]
[Resonant synth motif shifts subtly through analog filter modulation]
[Rhythmic Breakdown]
[Bass reduces, kick briefly recedes]
[Percussion and filtered synthesizer patterns remain active]
[Full Groove Return]
[Deep kick and rolling bass return]
[Tribal polyrhythms reach their fullest rhythmic density]
[Minimal melodic changes, strong hypnotic momentum]
[Extended DJ Outro]
[Percussion layers progressively drop out]
[Kick, bass and core rhythmic elements remain for mixing]
[End]
```

Why it works / gotchas

Aspect	Version A (faithful)	Version B (modern club)
Goal	reconstruct the original groove	modernise, keep the percussive identity
Kick / bass	arrive late ("Low-End Arrival")	minimal kick from the Groove Introduction
Tension	percussion dropouts	real breakdown: bass and kick recede
Edges	short intro, fading outro	DJ-friendly intro, extended outro for mixing
Space	restrained effects	dry upfront drums vs. delicate spatial effects, warehouse feel

- Start with **A**; move to B once A sounds like the original.
- B loses the late low-end "arrival" — if that matters, keep A's structure and only borrow B's Styles.
- ~126 BPM in Styles is an estimate from the snippet (see `nonconformist-hell-yeah-sound-dna`); fix it here if the DAW project says otherwise.

Diagram brief

- Type: two stacked arrangement timelines (A on top, B below) on the same time axis.
- B blocks: DJ Intro → Groove Intro → Tribal Rhythm Dev → Main Groove → Rhythmic Breakdown → Full Groove Return → Extended DJ Outro.
- Density curves: A steps up mid-track; B starts earlier, has a clear dip at Breakdown, peaks at Full Groove Return.
- Small legend: "A = faithful, B = modern club".
