NONCONFORMIST — continue a live-session recording with Suno Extend

Problem

Turn the sage solo snippet into a full track by continuing the real audio, and compare takes instead of guessing.

Instant solution

Loop:

1. **Trim** to just under 60 s and **keep the percussion ending**: cut from the start, e.g. `ffmpeg -ss 2.1 -i snippet.wav -c copy snippet-59s.wav` (61.02 → ~58.9 s).
2. suno.com/create → Upload Audio → the trimmed file.
3. Select it → **Remix/Edit** → **Extend**; set the start point near the end of the percussion passage.
4. Styles: SAGE-3A first (`nonconformist-sage-solo-suno-3a-faithful`). Instrumental on. Lyrics block if the UI accepts it.
5. Generate 2+ takes. Listen to the drums → kick + bass transition first.
6. Score every take (table below) against a target set before take 1 (e.g. 70; my default, not from the analysis). Below target → **change ONE parameter** → back to step 3.
7. At or above target → **Get Whole Song** to stitch original + continuation.
8. Then SAGE-3B as the second experiment.

QA rubric (score 1–5 after listening; weighted = Σ score × weight × 20, weight as a fraction, e.g. 0.30)

Criterion	Weight
Original groove fidelity	30 %
Seamless continuation	25 %
Musical development	20 %
Sound quality / low end	15 %
DJ-ready ending	10 %

Example: all 4s → 80 / 100.

Generation log (one row per take)

```
| # | date | prompt | extend at | changed | groove | seam | dev | low | end | /100 |
keep? | notes |
|---|------|--------|-----------|---------|--------|------|-----|-----|-----|------|--
-----|-------|
| 1 |      | 3A     |           | —       |        |      |     |     |     |      |
|       |
```

Suno limits (help.suno.com, checked 2026-10-20)

- Free: audio upload up to 60 s, then Extend or Cover (the article is old; re-check in the UI). Pro/Premier: 8 min.
- v6 / v6-wild / v6-mini: up to 8 min per generation.
- Free: 50 credits, renewed daily; results are **personal, non-commercial** only.
- "v6-mini is the Free model": unconfirmed.

Why it works / gotchas

- Trimming the end instead of the start throws away the percussion ending that the continuation must pick up.
- Bracket Lyrics are guidance, not timeline control; the Extend start point is the real control.
- One change per take keeps the log comparable; change prompt, start point or variant, never two at once.
- **Licensing checkpoint:** before any release under Gabe Sage, check the plan's terms. Free-plan generations are non-commercial even when the uploaded audio is your own composition.

Diagram brief

- Type: flowchart with a retry loop.
- Trim (keep ending) → Upload → Extend (3A) → Generate → Score ≥ target? → no: change ONE parameter → back to Extend; yes: Get Whole Song → 3B experiment.
- Side card: rubric weights as a 5-bar chart; licensing checkpoint as a gate before "release".
