
Lifecycle — separate API workflows, not one request
1 · Ingest
sales, price, promo, inventory
ingest
2 · Features
lags, shifted rolling, calendar
featuresets
3 · Train
baselines, regression, trees
forecasting
4 · Backtest
chronological folds + metrics
backtesting
5 · Select & register
rank, store artifact, set alias
model_selection + registry
load champion via alias
6 · Forecast
future demand, what-if
forecasting + scenarios
7 · AI decision support
RAG assistant, experiment agent
rag + agents
Demo wiring — make demo → scripts/run_demo.py
seed
features
train ×3
backtest
register
